

What is NAD+?

NAD⁺ (nicotinamide adenine dinucleotide) is a helper molecule every cell uses to make energy, repair DNA, and support longevity pathways. NAD⁺ levels naturally decline with age, intense training, illness, and stress. Replenishing NAD⁺ with injections helps restore cellular energy and recovery.

Who is it for?

Everyone. If you want more consistent energy, improved focus or healthier aging, NAD⁺ may be right for you. NAD takes a few weeks to load up, but once it does you can really feel the effects.

What can it do?

Decrease Fatigue

Patients report improved alertness, fewer afternoon slumps and more consistent energy. NAD⁺ has been shown to help reduce daytime drowsiness and support your bodies natural energy production.

Support Healthy Aging

NAD⁺ helps maintain DNA repair and cellular vitality. It activates enzymes like sirtuins and PARPS that help repair DNA damage. It has been shown to slow cellular aging by maintaining genomic stability.

Improve Metabolic Function

NAD⁺ helps the body use energy more efficiently. It regulates metabolism and insulin sensitivity. It can help maintain a healthy weight and blood sugar balance. An excellent option for those who have seen success through previous weight loss efforts.

Improve Athletic Recovery

NAD⁺ is excellent for those who are either starting a physical activity routine or are more advanced in their physical fitness journey. It supports faster muscle recovery by aiding mitochondrial repair and improves endurance through better cellular energy output.

Recommended Loading Schedule:

Weeks 1-2: (2) 25mg injection/wk

Weeks 3-4: (1) 50mg injection/wk

Recommended Maintenance Schedule:

Weeks 5+: (1-3) 50mg injections/wk OR (1) 100mg injection/wk

Pricing

Loading Weeks 1-4: **\$200**

1 inj (50mg): **\$50**

1 inj. (100mg): **\$100**
